

Brihaspathi Technologies Collaborates with the leading logistics provider ProConnect, a Redington company.

Brihaspathi Technologies collaborates with all the leading industries of India to offer the best in class and innovative safety and surveillance systems. This includes end-to-end support on CCTV equipment supplies, early installation and robust maintenance services. We have scores of clients in public, private and gated community space. With PAN India presence, we have ambitious plans to emerge as the nation's one-point-hub for total safety and security solutions for a secure, progressive and peaceful India.

A new milestone of Brihaspathi Technologies is the resounding and epoch-making safety and surveillance project at ProConnect. Driven by vision to make ProConnect the most innovative Supply Chain Management Services Company, the company offers the best and custom services as per the unique needs of its customers. ProConnect is a Redington company, and pioneers an innovative and integrated value chain. ProConnect provides its services to the ecommerce giants of the country.

Brihaspathi Technologies has always accepted challenges as opportunities to innovate and bring the best of the safety and surveillance solutions to its clients. With ProConnect, a Redington Company, the challenges are quite evident. At other warehouses the storages were flat and more spread out (horizontal), however at ProConnect it was multiple height storage with Very Narrow Aisle (VNA) Technology. The team of experts from Brihaspathi Technologies made a meticulous study of the client's warehouses and evolved a custom CCTV surveillance system.

Brihaspathi Technologies' CCTV surveillance system at ProConnect's warehouse included strategic placement of 48 IP cameras for extensive coverage. This included complete safety and surveillance monitoring of warehouse, loading area, parking and main gate of the warehouse. At the monitoring station, a 64-channel NVR with display was installed. Also for robust performance, the CAT6 armored networking cable with POE switches were utilized. ProConnect project is quite prestigious for Brihaspathi Technologies as it demanded for the first time a full-scale and elaborate CCTV surveillance system across the entire warehouse.
